Keyword: Network Security System

Abstract:

In building a network of points that a lot of attention is on the network operating system installation and implementation of network security systems and maintenance of existing network systems. Data security is very important but because it provides windows applications security system that can protect applications that are used by the user that is using the mandatory profile and policy editor. a user is restricted to limit the network but also users can create security on the local drive directory is used so it can not be accessed by anyone, including supervisors.
